

ARTESOFT

Acoustic paper yarn reliefs

Design by: Riitta Pappinniemi

Artesoft are unique hand-woven sound absorbing reliefs made of paper yarn using wasted material, designed and woven by the Finnish textile designer Riitta Pappinniemi.

They are suitable both in the private home as a sound absorbing beautiful and unique decoration and in public spaces or offices for an improved acoustic environment.

A pleasant and calm interior atmosphere is created by the soft and light tones of paper yarn fabrics.

Artesoft also provides a suitable environment to allergics due to its non-dusting ability, because of the compactness of the wood fibers the reliefs doesn't gather dust or dirt.

These sound absorbing reliefs are available in a wide range of colors and each piece is customized in size and shape as required. For Class A sound absorption, affixing 20 mm of peat fiber behind this paper yarn is recommended.

- Available in a wide range of colors.
- Size and shape as required.
- Material: Hand woven paper yarn
- Wall Mounting: To securely hang each panel on the wall, first attach a wooden plate (included) to the wall and then use two screws to fasten the yarn panel to the wooden plate.
- Care: gently vacuum dust
