

EARTH VALLEY

Acoustic wall panel

Design by: Johanna Örn

Earth is a uniquely designed sustainable acoustic art wall panel made out of peat fiber. It fits perfectly both in a private home and in public spaces where sound and noise reduction is needed.

For Swedish designer Johanna Örn nature is an endless source of inspiration as she finds it in different tactile surfaces, organic structures of natural materials, and from the variety of colors found in nature. "The design process is about finding the right balance between the unique expression and the self-evident simplicity and quality of good design that makes an object last in the long run."

The Acoustic art creation Earth is produced in two versions, Earth mountain and Earth valley and as the names reveals its about the the shape of the relief, either it is built as a formation in different heights or different depths. These two variants are fantastic to have together, but can also very well be used individually.

- Colors: Off white and also available in all NCS and RAL colors.
- Material: Peat fiber
- Size: 1000 X 1000 X 100 mm
- Mold resistant
- Constitutes a very good thermal insulation material
- Recyclable and nonallergic
- Fireproof class B
- Wall Mounting: To minimize wall damage, a metal plate hanger behind the panel is recommended and each panel requires 2 screws. Enhanced sound absorption can be achieved by creating a 20 mm gap from the wall.
- Care: wipe clean with a water dampened cloth or brush surfaces.
