

DOTS

Acoustic peat fiber wall panels
Design by: Amsell Berlin Design

Acoustic wall panels made in frameless peat fiber moss, 100 % natural and ecological material with extremely good acoustic properties (sound absorption class A).

Designstudio Amsell Berlin was established 2004 in Stockholm, Sweden, by Pia Amsell and Barbro Berlin. The studio's work covers design of a wide range of products like tableware, lighting, textiles and also furniture.

“What inspires most is when you have a context to relate to, it can be a place, a function, an activity, etc. Something that boosts the inspiration so that you can feel a direction in the creativity that moves in several levels. In the work with Dots, we thought of patterned tiles that you can turn and twist to get different patterns. One absorber should be able to stand for its own and also work together with other plates depending on how many that are needed in a specific environment.”

Material: Peat fiber

Standard sizes: w 600 x h 600 x d 40 MM or w 600 x h 600 x d 50 mm
