

HEMP FIBER

Acoustic boards and panels

Exquisite acoustic wall and ceiling panels that can be custom designed in a wide range of NCS or RAL colors and print.

The production of the Hemp fiber and recycled materials is sustainable both from nature and from people's point of view. The material have been measured at VTT (Finnish National Test Laboratory) according to EN ISO 3565 / EN ISO 11654 standards.

All Hemp acoustics belong to the best sound attenuation class, in this case class A. These products do not require any air gap behind them, and the required room attenuation is reached with smaller amount of the acoustic panels than other sound absorbers due to it's extremely high quality. The products are also tested and safe room air safety, they have Finnish indoor M1 rating. The panels are formable to any individual color and composition.

- Sound absorption class A.
- Non-toxic and fireproof class B
- Extremely strong and durable.
- Negative carbon footprint.
- Max. panel size: 1600 mm x 1000 mm, 43 mm
