

# QWAIET WOOL

Acoustic textiles

Design by: Margareta Zetterblom

Qwaiet Wool is a new form of technically developed sound absorbing textile that has a visually appealing appearance and offers a sharp contrast to modern building materials such as concrete and glass. The textile is sound absorbing and provides aesthetical values to public environments and home interiors.

Naturally soft, hardwearing and comfortable. Aesthetically pleasing.

- Material: 100 % ecological wool
- Available in 12 standard colors.
- Size and shape is customized as required.
- Care: Gently vacuum clean, For optimal care, hand wash in cold water with a mild detergent. If dry cleaning, ensure the cleaner is experienced with wool fabrics and requests gentle handling.
- To improve sound absorption, hang the acoustic wool on the ceiling using screws and wires. Adjust the gap to a minimum of 50mm, depending on your ceiling height. Add a stylish touch by using the metal stick to create curves, enhancing both function and aesthetics. For wall hanging, use two screws where the wool hanging begins.
